

JASON D. KIESLING

jason@jasondkiesling.com | Denver, CO

SKILLS

Languages	TypeScript, JavaScript, Python, SQL (Postgres)
Technologies	Node, React, AWS, CI/CD, Redis/Valkey, BullMQ, Terraform

WORK EXPERIENCE

- | | |
|---|-----------------------------|
| Autodesk | <i>Remote</i> |
| Senior Software Engineer | November 2024 - Present |
| <ul style="list-style-type: none">Engineer features and infrastructure for the Autodesk Forma Construction reporting backend, spanning application code, queues, infrastructure-as-code, and observability.Use OpenTelemetry to pinpoint performance bottlenecks and drive optimizations that have supported over 100% year-over-year growth with less than 15% increase in compute.Re-architected a monolithic application into a service-based architecture. Included load-test-driven capacity planning and a zero-downtime production rollout. Enabled targeted scaling of the most-used services.Designed a sidecar-based architecture to resolve a recurring reliability issue with dependent services, isolating each workload's dependencies into its own task to eliminate the noisy-neighbor problem.Migrated observability to a unified OpenTelemetry platform and manage it declaratively as code, cutting false-positive alerts from hourly to less than monthly.Respond to production incidents end to end — diagnosing root causes, driving resolution, and performing retrospective analysis.Author design proposals (RFCs) and provide design review and mentorship across the team. | |
| RevOps | <i>Remote</i> |
| Software Engineer II | August 2021 - November 2024 |
| <ul style="list-style-type: none">Led the RevOps automation platform which included external integrations (Salesforce, HubSpot, Chargebee, Docusign) along with approval workflows, metrics, and APIs.Architected a Deno based serverless functions platform, enabling users to write TypeScript to customize application functionality. Features include versioning, release management, and third-party connections.Led initiative to migrate to Terraform, fully deploying all cloud infrastructure through code.Executed a frontend deployment migration project, implementing deploy previews, reverse proxying, and instant rollbacks, which resulted in a 97% cost reduction and eliminated monthly outages.Refactored NoSQL database marshalling implementation, resulting in up to 90% faster processing in addition to improved type-checking and validation. Reduced timeouts for third party integrations from 14% to <1%. | |
| Software Engineer I | January 2021 - August 2021 |
| <ul style="list-style-type: none">Developed a full-stack web application including React, Node.js, and Python.Extended and maintained integrations with third party systems such as Salesforce, HubSpot, and DocuSign. | |

EDUCATION

University of Massachusetts Lowell
B.S. Computer Science | *cum laude*, Commonwealth Honors | Minors in Business and Mathematical Sciences

AWARDS AND HONORS

- Eagle Scout** | Boy Scouts of America
- Vigil Honor** | Order of the Arrow, Boy Scouts of America
