

JASON D. KIESLING

jason@jasondkiesling.com | Denver, CO

SKILLS

Languages	TypeScript, JavaScript, Python, SQL (Postgres)
Technologies	Node, React, AWS, CI/CD, Redis/Valkey, BullMQ, Terraform

WORK EXPERIENCE

Autodesk

Remote

Senior Software Engineer

November 2024 - Present

- Engineer features and infrastructure for the Autodesk Forma Construction reporting backend, spanning application code, queues, infrastructure-as-code, and observability.
- Use OpenTelemetry to pinpoint performance bottlenecks and drive optimizations that have supported over 100% year-over-year growth with less than 15% increase in compute.
- Re-architected a monolithic application into a service-based architecture. Included load-test-driven capacity planning and a zero-downtime production rollout. Enabled targeted scaling of the most-used services.
- Designed a sidecar-based architecture to resolve a recurring reliability issue with dependent services, isolating each workload's dependencies into its own task to eliminate the noisy-neighbor problem.
- Migrated observability to a unified OpenTelemetry platform and manage it declaratively as code, cutting false-positive alerts from hourly to less than monthly.
- Respond to production incidents end to end — diagnosing root causes, driving resolution, and performing retrospective analysis.
- Author design proposals (RFCs) and provide design review and mentorship across the team.

RevOps

Remote

Software Engineer II

August 2021 - November 2024

- Led the RevOps automation platform which included external integrations (Salesforce, HubSpot, Chargebee, Docusign) along with approval workflows, metrics, and APIs.
- Architected a Deno based serverless functions platform, enabling users to write TypeScript to customize application functionality. Features include versioning, release management, and third-party connections.
- Led initiative to migrate to Terraform, fully deploying all cloud infrastructure through code.
- Executed a frontend deployment migration project, implementing deploy previews, reverse proxying, and instant rollbacks, which resulted in a 97% cost reduction and eliminated monthly outages.
- Refactored NoSQL database marshalling implementation, resulting in up to 90% speed decreases and improved type-checking and validation. Reduced timeouts for third party integrations from 14% to <1%.

Software Engineer I

January 2021 - August 2021

- Developed a full-stack web application including React, Node.js, and Python.
- Extended and maintained integrations with third party systems such as Salesforce, HubSpot, and DocuSign.

EDUCATION

University of Massachusetts Lowell

B.S. Computer Science | *cum laude*, Commonwealth Honors | Minors in Business and Mathematical Sciences

AWARDS AND HONORS

- Eagle Scout** | Boy Scouts of America | March 2017
- Vigil Honor** | Order of the Arrow, Boy Scouts of America | October 2016
